Raise Production Inc. Provides Operational Update

CALGARY, Alberta – April 14, 2015 – Raise Production Inc. (TSX-V: RPC) (“Raise” or the “Company”) is pleased to provide an operational update regarding its Horizontal Wellbore Production System (the “System”).

During the month of March, the Company received the latest iteration of the part that had caused previously disclosed malfunctions in the System during test deployments. This new part has been performing successfully for over three weeks in an accelerated performance test facility that closely resembles actual wellbore conditions. This test period equates to almost 70 days in actual field time. The part is the first to be received and pass initial quality control and testing protocols and is performing as required under functional conditions.

In early April, the Company received an identical part from an alternate supplier using a different manufacturing process. This part has also passed initial quality control and testing, and is now undergoing extended testing under functional conditions at the Raise facility. This test has been ongoing for a number of days.

The manufacturers of both parts, although using different processes, now have the ability to produce parts that are repeatable and consistent to standards required for field operations.

The Company will continue to test both samples over the ensuing weeks in the test chambers and upon successful completion of these tests, the System will be readied for deployment into the industry partner test wellbore.

The Company will continue to inform shareholders of its progress and deployment plans for the System.

About Raise Production Inc.

The Company is an innovative oilfield service company that focuses its efforts on the production service sector, utilizing its patented products to enhance and increase ultimate production in both conventional and unconventional horizontal oil and gas wells.
